Graphing Exponential and Logarithmic Functions

Exponential Function – An exponential function is any function that can be written in the form of $f(x) = a^x$, where x is a real number, a > 0 and a ≠ 1. The number a is called the base of the exponential function.

Example: Graph the following exponential function by using a table to find at least three ordered pairs.
1) $f(x) = 2^x$

Solution: a) Let x = 0, 1, and 2 and plug into the function to solve for f(x)

A) $f(0) = 2^0 = \mathbf{1}$ B) $f(1) = 2^1 = \mathbf{2}$ C) $f(2) = 2^2 = \mathbf{4}$

x	y
0	1
1	2
2	4

Graph the following exponential function by using a table to find at least three
Example: ordered pairs.

2)

$$f(x) = -2^x$$

Solution: a) The graph from Example 1 reflected over the x-axis.

A) $f(0) = -2^0 = -2^0 = -1$ B) $f(1) = -2^1 = -2$ C) $f(2) = -2^2 = -4$

x	y
0	−1
1	−2
2	−4

Logarithmic Function – Any function in the form of y = log$_a$x which is the exponent y such that $a^y = x$.

The number a is called the base of the logarithm and a can be any positive constant other than 1.

Example: ordered
pairs.

3)

Graph the following logarithmic function by using a table to find at least three

$$f(x) = \log_2 x$$

**Solution:** a) Remember that y = f(x) and in this case $2^y = x$

b) Let y = 0, 1, and 2 and plug into the function to solve for x

A) x = $2^0 = 1$ B) x = $2^1 = 2$ C) x = $2^2 = 4$

x	y
1	0
2	1
4	2

Example: ordered pairs.

4)

Graph the following logarithmic function by using a table to find at least three

$$f(x) = -\log_2 x$$

Solution: a) This is the graph of Example 3 has been reflected over the x-axis.
b) Remember that y = f(x) and in this case $2^{-y} = x$

Let y = 0, −1, and −2 and plug into the function to solve for x

A) x = $2^0 = 1$ B) x = $2^{-(-1)} = 2^1 = 2$ C) x = $2^{-(-2)} = 2^2 = 4$

| x	y
1	0
2	−1
4	−2

Example: ordered pairs.

5)

Graph the following exponential and logarithmic functions by using a table to make at least three ordered pairs:
Solution:

1) $f(x) = 4^x$

2) $f(x) = -3^x$

3) $f(x) = log_4 x$

4) $f(x) = -log_3 x$
